

ANKI

CARE

EVERYDAY MAINTENANCE

The easiest and most environmental way to keep your rug fresh and dust free is to vacuum it regularly. If your rug is placed in a room with direct sunlight, we recommend to rotate it once or twice every year. This way you can even out the fade caused by the UV-radiation from the sunlight. All designs from ANKI are double sided, so sometimes instead of washing the rug, you can flip it upside down instead of washing it.

WASHING

All our rugs can be flat washed with +30°C (+86°F) degree water. Drycleaning, machine wash and tumble dry are not allowed. Make sure that the rug is thoroughly rinsed after washing due to the linen releasing some natural colour. Rinsing is especially important if your rug is white or light coloured. If your rug has fringes, straighten them while they are still wet. The “Kaavilainen kanttaus” can be ironed on low heat while still wet.

DETERGENT

A soap based detergent is always a safe and environmental option. For example Marseille soap is a gentle and eco-friendly choice to clean your rugs with. For stain removal you can use Gall Soap. We don't recommend the use of synthetic detergents due to environmental reasons.

STORAGE

In case you need to store your rugs, we encourage you to have them cleaned and rolled up. Always roll the rug, don't fold. When the rugs are stored dry and clean they remain fresh and in good condition.
